Abstract (en)

A device (200) for clamping a plurality of pipes to each other, said device comprising: a rigid frame (201), first (202) and second (203) clamping means supported on the frame for tightly engaging inner sides of respective first and second pipes having respective ends in line with and at a welding distance from each other, means for operating the first clamping means, means for operating the second clamping means, means for determining an abutment position of the first clamping means, means for storing data concerning the abutment position of the first clamping means in a memory, control means for controlling movement of the second clamping means to a position based upon the stored data concerning the abutment position of the first clamping means. Furthermore a method for applying such a device is revealed.
