Abstract (en)  
A combined bag 50 and spout 60 arrangement suitable for insertion into an aerosol can body 20,30,40. The spout 60 is composed of two sections, which are preferably integrally moulded. A tubular section 63 is adapted to accommodate a valve cup 70 and is thereby "clinched" in the aerosol can body 20,30,40. A fish-tail section 62 is provided to form a good seal with the bag 50. The bag 50 and spout 60 may be provided in a pre-charged aerosol can body 20,30,40 ready to be filled with a product. The relatively large pathway through the spout 60 means that a product may be filled into the bag 50 at higher speeds than is possible when the bag 50 has to be filled through the valve 5, which defines a relatively restricted pathway.
