Abstract (en)
[origin: EP1985763A1] The system has transportable components (17, 18) emptyable and fillable with a fluid i.e. water, and joined to each other for forming a flood protection wall with lateral ends. The transportable components are held together in a joined position by connecting units (22, 23). A sealing element (19) seals a gap and/or a connecting area (16) developed between the two joined transportable components in area-wise. The connecting units are formed with a complementary shape.
