Abstract (en)

An antenna module(100) and a signal-processing module(200) using the antenna module(100) to process a plurality of wireless signals are proposed. The signal-processing module(200) includes the antenna module(100), a first processing circuit(202) and a second processing circuit(204). The antenna module(100) includes at least a first antenna(110), at least a second antenna(130) and a shielding portion(120). The first antenna(110) is utilized to transmit or receive signals corresponding to a first wireless communication standard, the second antenna(130) is utilized to transmit or receive signals corresponding to a second wireless communication standard, and the shielding portion(120) is disposed between the first antenna(110) and the second antenna(130). The first processing circuit(202) is coupled to the first antenna(110) for processing signals of the first antenna, and the second processing circuit(204) is coupled to the second antenna(130) for processing signals of the second antenna.
