Abstract (en)
[origin: EP1986276A2] A card edge connector (3) includes an insulation housing (31) which receives a child board, and a pair of latch arms (33) which project from both ends of the insulation housing (31) and hold the child board and which are formed by bending metal plates. Each of the latch arms (33) includes a hold arm (331) and a support arm (333) which is formed through a folded-back portion (332) folded back outwardly, from the hold arm (331) by 180°. The support arm (333) includes a first support section (336) which extends forward from the folded-back portion (332) and which bends outwardly in front of a front edge (332a) of the folded-back portion (332). The support arm (333) also includes a second support section (337) which is separated from the first support section (336) by a long hole or slot and is connected to the first support section at a rear edge (332b) of the folded-back portion (332). The second support section (337) is bent outwardly at a location closer to the insulation housing (31) than the front edge (332a) of the folded-back portion (332). The second support section (337) is connected to the first support section (336) at a front thereof.
