Abstract (en)

[origin: US8157138B2] The invention relates to a carrying system for a rucksack with at least one accommodation container with at least two shoulder straps which connect the rucksack to a carrier, with each shoulder strap having at least two strap sections, and with each shoulder strap having at least one first releasable connecting device which connects the two strap sections to one another. The carrying system according to the invention is characterized in that a triggering device is provided which can be operated by the carrier and is connected to at least two releasable connecting devices in such a way that the connecting devices are released substantially without a time delay when the triggering device is operated.
