Abstract (en)
[origin: WO2007087857A1] The invention relates to a pallet (16) for a pallet container (10) for storing and for transporting liquid contents, in particular flammable or hazardous contents. The pallet (16) has a top covering panel (18) made of profiled sheet steel and a substructure (20) comprising a plurality of plastic feet (24, 26, 30, 32, 34) or runners (36, 38) and is provided with corresponding means which earth it electrically overall. In order to ensure a reliable electrical discharge (electrical earthing) of, for example, electrostatic charging, accompanied by the properties of a high resistance to mechanical loading, fewer than half the plastic feet (24, 26, 30, 32, 34) or runners (36, 38), according to the present invention, consist of plastic material which is electrically conductive and more than half the plastic feet (24, 26, 30, 32, 34) or runners (36, 38) consist of plastic material which is not electrically conductive.
