Abstract (en)  
[origin: WO2007093454A1] Proposed is a valve module for supplying in particular gaseous media to an internal combustion engine, having a valve sleeve (7) in which a valve armature (9) having a valve closing member (11) is guided so as to be axially moveable relative to a valve seat body (15), which has a valve seat (13) and is fixedly arranged in the valve sleeve (7), in order to set a fluid flow between an inflow side and an outflow side (5). Here, according to the invention, a sealing device (21) which is composed of at least two annular sealing beads (22) is provided, which sealing device (21) is arranged with respect to at least one passage opening (17) such that the at least one passage opening (17) is situated between the sealing beads (22) in the closed position of the valve module (1).
