Abstract (en)  
[origin: FR2897672A1] The unit has turn signal and reversing lamps (20, 40) with light sources (22, 42) such as LED, held by classical units (24, 44) in openings (26, 46) of reflectors (28, 48), respectively, and a transparent lens (14) shielding the unit. The light emitted by the sources and reflected by the reflectors is focused for forming light beam emitted in illumination ranges (32, 52) via the lens. A screen (60) is placed between the lens and one light source, and guides a part of the light emitted by the light source towards one reflector associated with the other light source.
