Abstract (en)

[origin: WO2007085448A1] The invention relates to a method for producing a metal contact structure of a solar cell. Said method comprises the following steps: applying a metal contact structure to a surface of the solar cell, reinforcing the metal contact structure in an electrolytic bath. The invention is characterized in that the metal contact structure is applied by applying a metal-containing ink to the surface of the solar cell by means of at least one pressure nozzle.
