Abstract (en)

[origin: WO2007093420A1] The invention relates to a seat control electronic system for controlling a drive (2) of a motor vehicle seat which is embodied and configured for detecting a characteristic variable (u, i, n) of the drive (2) during several short actuations of the drive (2), and to evaluate variables (u, i, n) respectively associated with several short actuations, and to determine a blocking function according to said evaluations.
