Abstract (en)
A bathrobe structure (1) is formed by weaving threads extending in one direction with other threads extending in a direction generally orthogonal to the former, to form certain patterns; said threads consisting of microfibers (3) and (4). The weaves may be of plain type, of twill type with oblique ribs formed by the offset between interlacings or of satin type, i.e. with looser weft and warp interlacings and thence with a smooth appearance, lustrous on the warp face and dull on the weft face. The microfibers (3 , 4) are composed of 80% polyester and 20% polyamide.
