Abstract (en)
[origin: EP1987734A1] The device has two supporting elements with vertical elements (4) and vertical carriers (5), respectively, where the vertical elements and carriers are adjustably arranged relative to each other. A strap (6) has ends fastened to vertical elements of the two supporting elements that enable deflection of the strap. A relative displacement between the vertical elements and carriers of one of the supporting elements results in a synchronous relative displacement between the vertical elements and carriers of the other supporting element.
