Abstract (en)  
[origin: EP1987745A2] The present invention is a beverage container (1), which can be easily dismantled through a pressure joint, so that a number of containers may be stacked up by stacking the lower base (4) of one container to the lower base (4) of another and by stacking up the upper part (2) of one to another thereby providing consumers with a broader, more effective container (1). The container (1) can be assembled for drinking purposes in different colors and may be shipped and/or stored by stacking up the separate parts. This will reduce and save space when being packed for sale and distribution purposes.
