Abstract (en)
The current invention discloses a compact size bubble generating machine (300). According to one aspect of the present invention, there is provided a bubble generating machine comprising a housing (301) having a top opening (307); a bubble generator positioned inside the housing and adjacent to the top opening; an impeller (303) positioned inside the housing; and a motor (304) positioned inside the housing and operatively coupled to the impeller and the bubble generator (300), wherein the motor, when actuated, causing the impeller and the bubble generator to rotate simultaneously.
