Abstract (en)
[origin: DE202007006546U1] A mobile edge-glueing device for sticking edging strips onto boards, with a container for hot-melt adhesive and a driven applicator roller extending into the container, in which the melting chamber in the container is divided by a partition into two zones which are connected by opening(s), preferably slot(s). A mobile edge-glueing device for sticking edging strips onto board-shaped workpieces, comprising a hot-melt adhesive container with a melting chamber, a feed chamber and a heater with at least one element to melt the adhesive, and a driven applicator roller with a first longitudinal section (S1) designed to apply the adhesive to the edge of the strip and/or the edge of the workpiece and a second section (S2) which extends into the feed chamber in order to convey adhesive to S1, the melting chamber being divided by a partition into two zones which are connected together by at least one opening, preferably in the form of slot(s).
