Abstract (en)

[origin: EP1987897A1] The device has a storage unit (23) whose winding gripper (22) holds a coil. A joining unit (27) provides the coil with a beam. The storage unit is movable between the coil and the storage, using a linear guidance (29) and a drive (28). The joining device is arranged at the storage unit. A band station has a band gripper with a blade for holding and cutting of the band. The band lies around the coil using roll grippers. An independent claim is also included for a method for receiving a winder and for transporting to storage of a coiled cable section.
