Abstract (en)

The invention relates to a device (1) at a spreader end (2) for a standing rigging, such as, for instance, shrouds (3, 4, 6), and comprises an end housing (5) to which mutually counter-directed parts of a standing rigging, such as, e.g., wires, rod or a combination thereof, are detachably connectable as well as that additional parts of a standing rigging, such as, e.g., wire (6) or rod (4), are connectable therewith. According to the invention, the end housing (5) is formed of a number of holder parts (7, 8) that are displaceable in relation to each other and have a slot-shaped and/or hole-shaped reception opening for a wire end and/or a rod end or another shroud terminal.
