Abstract (en)

The present invention relates to a security and access control system for a telecommunication cabinet with a door 1 with improved security and control attributes as well as a telecommunication cabinet with a door 1 comprising a security and access control system with improved security and control attributes. To achieve this the system comprises locking means 2, 3, 4 adapted to be moved from a first position where the door 1 is locked and cannot be opened into a second position where the door 1 can be opened, blocking means 12 adapted to be moved from a first position where the locking means 2 are secured and cannot be moved into a second position where the locking means 2 can be moved, controlling means for controlling the position of the blocking means 12, and transmitting means 11 arranged between the locking means 2 and the blocking means 12 adapted to transmit a movement of the locking means 2 into a movement of the blocking means 12 when the blocking means 12 are in its second position.
