Abstract (en)  
[origin: EP1988242A2] The holder has an adjusting device (28), which includes a bearing element (29), which is connected with a lower flap part (20), and an adjusting element (30). The adjusting element is connected at a tilting axis with a setting lever (25) tiltably. The adjusting element is connected for position adjustment of a cabinet flap in a desired adjustment position around a rotational axis rotatably with the bearing element. A fixing unit is provided for torque proof fixing of the adjusting element to the bearing element in an adjusted desired adjusting position.
