Abstract (en)

[origin: EP1988247A2] The method involves fixing a sealing joint (6) on a branch of L shaped rabbet (3) supporting a surface (7) of a panel (4). A flexible wall (10) is extended in the rabbet such that the wall is arranged at outside of the rabbet, where the wall carries a sealing joint (8). The panel is placed in the rabbet on the flexible wall. A surface (9) of the panel is covered using a glazing bead (5) with a part of the wall adjoining with the joint (8) by folding the part of the wall on the surface (9) of the panel and setting the glazing bead on a profile (2). An independent claim is also included for a load-bearing frame comprising sealing joints.
