Abstract (en)
A tool (100) for use in locating in its position of use a supporting device for a window blind apparatus, the supporting device comprising at least one laterally projecting portion adapted to slide in use between a glass pane and a resilient retaining bead which bears against the glass pane, the tool comprising a body portion (102) and a cavity (118A,118B) configured to receive therein a first portion of said supporting device such that the laterally projecting portion of the supporting device projects from the body portion of the tool, whereby the supporting device can be urged by use of the tool to move in a direction effective to insert said laterally projecting portion between the glass pane and the bead. Also disclosed are a method of using the tool and a kit of parts including the tool.
