Abstract (en)

[origin: WO2007098913A1] The invention relates to an arrangement of a partition-wall element (2) and of a surround, which surrounds the partition-wall element (2) laterally, for a room divider, in particular for a shower cubicle. According to the invention, the surround comprises a profile (4) having a web (4a) and a flange (4b), which is arranged essentially perpendicularly to this web (4a), and also having a first double-sided adhesive strip (6) and a second double-sided adhesive strip (8). The first adhesive strip (6) here can be fitted on a longitudinal side (10) of the flange (4b), while the second adhesive strip (8) can be fitted on a longitudinal side (12) of the web (4a), this longitudinal side being directed towards the aforementioned longitudinal side (10) of the flange (4b), to form an air channel (5), in which case the partition-wall element (2) can be adhesively bonded to the flange (4b) by means of the first adhesive strip (6) on a longitudinal side (16), which is directed towards the flange (4b), in the region of an end side (14) and can be adhesively bonded to the web (4a) by means of the second adhesive strip (8) on this end side (14).
