Abstract (en)
   [origin: WO2007093635A2] The invention relates to compositions for the prophylaxis and/or treatment of viral infections, in particular of infections with influenza viruses which cause influenzal infections. The invention relates to compositions which comprise inhibitors of the ubiquitin-proteasome system, in particular proteasome inhibitors, as active ingredients. The present invention further relates to the systemic and topical, preferably the aerogenic administration of proteasome inhibitors. The active substance employed according to the invention as proteasome inhibitor can be employed with at least one further substance having antiviral activity for the prophylaxis and/or therapy of influenzavirus infections.
