Abstract (en)
[origin: WO2007098861A1] The invention relates to an abseiling device comprising a cable feeding point and a cable output point (26) for a safety cable (16) comprising a disk (10) for the cable and a brake device (12) for the disk (10). The brake device (12) is arranged on the same shaft (14) as the cable disk (10). At least one friction brake (20) is also arranged on the abseiling device in such a way that it directly interacts with the safety cable (16), braking the same by means of frictional engagement.
