Abstract (en)
[origin: WO2007099109A1] The present invention relates to a dryer (1) comprising a dehumidifier unit (6) situated at the exit of the condenser (4), providing to remove the moisture from the humid air by means of a desiccant material capable of adsorbing the moisture from the humid air flowing in the circulation channel (3), wherein the moisture accumulated in the dehumidifier unit (6) is removed and discharged, considerably removing the moisture retained in the humid air leaving the condenser (4) without being fully condensed, thus enhancing the drying efficiency.
