Abstract (en)
[origin: US2007191101A1] Multiplayer tournaments may be established, and then automatically executed by tournament server devices to help provide users with quality matchups against players of similar skill. Tournaments may be defined by an administrator, and then automatically instantiated any number of times to accommodate demand by players. Some tournaments may group players of similar rank in tournament rounds, and may also employ a window factor to prevent players from playing together too soon after playing together in a prior round. Some tournaments may use a leaderboard qualification process, allowing potential entrants to qualify for tournaments by accomplishing feats specified in qualification parameters.
