Abstract (en)

[origin: DE102006008765A1] The method involves determining the output property of the output device which influences graphical output. An allocation rule for converting the input data into output data is defined on the basis of determined output property of the output device which influences graphical output. The input data are converted into output data using the defined allocation rule. Independent claims are also included for the following: (1) a method for converting color-describing input print data for graphical output using printer or copier (2) a method for converting color-describing input data with fundamental color of a color model (3) a device for converting color-describing input data suitable for graphical output (4) a device for converting color-describing input print data for graphical output using printer or copier (5) a device for converting color-describing input data with fundamental color of a color model.
