Abstract (en)  
[origin: EP1989955A1] The corner cabinet rotational fitting (1), with a damping component by which the return movement of an opening and closing front panel (10) is braked, has a step-up or step-down gearing for dynamic control of the damping force of the damping component. The damping component is formed as a rotational damper or linear damper and interacts with a fitting element which is fastened in the cabinet. The gearing has one toothed wheel interacting with a movable element of the damping component, and another toothed wheel interacting with toothing on a guide member.
