Abstract (en)
[origin: EP1989966A1] The frame has a set of partial frameworks (1c-1e) connected by coupling elements e.g. guide lever (12), in such a manner that the frameworks are folded around 90 degrees from a couch position into a seat position. A supporting leg (10) is horizontally folded in the seat position. The seat support is connected with the supporting leg by a set of retaining rods, such that the seat support is controlled by an eccentric. The seat support is rearwardly shifted closely below the framework (1e) in the couch position, and is aligned to the framework (1e) in the seat position.
