Abstract (en)

The invention relates to a composite sanitary dispenser designed and produced with a view to achieving numerous substantial advantages over existing means used for the same purpose by combining two functions in a single dispenser, namely a toilet tissue roll holder function and a wet wipe holder function. Background to the invention: toilet tissue holders and dispenser have been known for a long time, as have wet wipe dispensers, with their respective advantages and disadvantages, but there is no precedent for a composite dispenser having both of these functions. Ever since wet wipes have been in use in the field of child and adult hygiene, it has been possible to use them in various locations, unlike the dispenser of the present invention. Some wet wipe dispensers are portable and do not have a predetermined location, which is inconvenient because they can be placed wherever one user chooses and as a result be difficult for other users to find. Meanwhile, conventional toilet tissue roll holders that cannot be used to dispense wet wipes are also known.
