Abstract (en)
[origin: EP1990100A1] The machine has a hydraulic circuit for supplying a hydraulic drive (5) with hydraulic fluid. A lubrication line (10) is branched off from the hydraulic circuit by a transmission (3) can be supplied with hydraulic fluid as a lubricant. Supply of lubricant can be changed depending on an operating condition of the transmission. A dosing device includes a dosing pump (16) that is coupled mechanically to the transmission. A lubricant return device is provided with a lubricant which can be discharged from the transmission depending on the operating condition of the transmission. An independent claim is also included for a method for producing a sheet pile wall.
