Abstract (en)

[origin: EP1990197A2] The method involves measuring an image of a printing film, which is formed by a printing form cylinder (1), together with color inking roller (2), and an image of another printing film, which is formed by the color inking roller together with a brayer (3). Two servomotors are controlled by an electronic control device depending on measurement signals of a measuring device for measuring widths of the images of printing films to adjust the films.
