Abstract (en)

[origin: EP1990252A1] An actuating and monitoring module, particularly for operating units, i.e. wayside equipment, of railway systems or the like, particularly for switch machines, comprising: a source of a DC power signal; a line for supplying said power signal, also known as control signal, to said operating unit, which line connects the outputs of the power signal source to the inputs of the operating unit; switching means in the power signal supply line for switching the operating unit on and off by remote enabling/disabling controls, characterized in that according to the invention, the actuating module has automatic switching means for switching the inputs of the unit and/or the outputs of the power signal source to the short circuit state, in the disabled unit state, i.e. with no power signal on the supply line.
