Abstract (en)

[origin: EP1990291A1] The container (1) has a fixation unit (4) integrated to a hollow compensation unit (3) e.g. cylindrical shaped compensation unit. The fixation unit has shape memory mechanical elements (6) such as wings, panels and blades, which integrate a compensation device (2) of the container by exerting friction force that is perpendicular to an inner lateral wall, on the wall after elastic deformation of the elements consecutive to insertion of the device in bottom (9) of the container. A closing unit i.e. cap, closes an upper part of the container.
