Abstract (en)

[origin: EP1990397A1] The claimed inventions relate to petrochemistry, in particular to additives for lubricating and fuel materials and to a versatile additive-containing fuel for internal combustion engine, diesel fuel and a furnace fuel for furnaces of heat-and-power generating plants and metal melting furnaces. The inventive additive contains 0.1-82% of monoatomic aliphatic saturated C1-C4 alcohol, 0.1-16% of water- and/or alcohol-soluble ammonium salt of saturated monocarboxylic C2-C5 acid and/or 0.1-44% of carbamide and water up to 100%. The fuel contains a mixture of liquid hydrocarbons and the additive dissolved therein. Gasoline, diesel fuel and furnace fuel are used in the form of the liquid hydrocarbon mixture. The additive is embodied in the form of the versatile additive having the above-mentioned composition taken in a quantity ranging from 0.000005 to 0.005%. The liquid hydrocarbon mixture is also embodied in the form of a colza oil and/or a diesel fuel and/or a colza oil methyl ether. Said invention makes it possible to reduce a soot deposit formation during the operation of engines, decrease the toxicity of exhaust gases and the wearing of metal components of engine fuel systems by increasing a molar refraction due to formation of a double ion layer in friction pairs.
