Abstract (en)

[origin: EP1990457A1] The machine (1) has a housing (2) and an oscillating lye container (9) respectively provided with a circular housing opening (4) and a circular lye container opening (8). A sleeve gasket (5) connecting the openings is placed over a bend section that rotates around the opening (4). An imposed region cooperates with a clamping unit formed as a clamping ring, and a rotating sealing lip for the door opening is arranged in the region. The region has a rotating circular supporting element formed as a supporting ring that radially covers an outer side of the ring in the region to support the region.
