Abstract (en)

[origin: EP1990458A1] The front loading laundry treatment machine (1) has a housing (2), a circular housing opening (4) closed by a door (3), a water container (5) with a circular water container opening (8) and a gasket sleeve (7) for connection between housing opening and water container opening. The water container is mounted in the housing in oscillating manner. The clamping ring is formed in one piece at the imposed area of the gasket sleeve. The clamping ring formed with respect to its periphery has low size, such that a tractive force acts in the clamping ring in the working support condition. Independent claims are also included for the following: (1) a sleeve gasket for a front loading laundry treatment machine (2) a method for attaching a sleeve gasket for a front loading laundry treatment machine.
