Abstract (en)
The invention provides a locking unit (4) for a door (2) or the like comprising an operating device (5) that can be moved from a closed position into an open position, a locking means (10) that can be moved by the operating device (5) from a first position where the door (2) is locked and cannot be opened into a second position where the door (2) can be opened, a blocking means (8) that can be moved from a first position where the operating device (5) is blocked in its closed position into a second position where the operating device (5) is not blocked and can be moved from its closed position into its open position, at least two actuating devices (16, 17) interacting with the blocking means (8), and a control element (14) for overriding at least one actuating device (16, 17).
