Abstract (en)
[origin: EP1990492A2] The lock (2) has a transmission unit (24) operated by a lock cylinder, where the transmission unit is provided for manually operating the lock. The transmission unit is effectively connected with a lock bar (12) for moving the lock bar, during operation of the transmission unit. A drive motor (20) is provided for motor-powered operation of the lock, and shifts a plunger block (14) between a locking position and a release position. The lock bar controls the plunger block, and the drive motor is effectively connected with the transmission unit for operating the transmission unit.
