Abstract (en)

[origin: EP1990502A2] The device has a tubular shaft (40) rotated by a hydraulic motor (53) and rotationally mounted via a frame with rectangular shaped vertical steel plates. A rotor of the motor is integrated to the shaft, and a stator of the motor is fixed to a support structure coaxially to the shaft. The steel plates are integrated to each other by upper and lower horizontal plates (43, 44) and rectangular vertical plates (45, 46). Rotational mounting of the shaft is ensured by bearings (87, 88) placed inside the frame and on both sides of a central staging of the shaft.
