Abstract (en)  
A gaming system (10) is disclosed which comprises at least one gaming communications module (30), at least one gaming server (16), a communications link (18) between the at least one gaming communications module (30) and the gaming server (16) for facilitating communications between the gaming server (16) and the at least one gaming communications module (30). The communications link (18) includes at least one communication wire (20) and the gaming server (16) is arranged to supply first and second server signals to the communication wire (20) from the gaming server (16). The system (10) also comprises a splitter device (24) in communication with the communication wire (20) and arranged to provide the gaming communications module (30) with two signal sources, one of the signal sources being for reception of the first server signals at the gaming communications module (30) and the other of the signal sources being for reception of the second server signals at the gaming communications module (30) .
