Abstract (en)  
[origin: WO2007101581A2] The invention relates to a powder formulation containing sterol in the form of a super-cooled melt from sterols and sterol esters, under the proviso that the sterol ester content is at least 30 wt % in relation to the content of the powder. The introduced sterol ester is a fatty acid ester having a chain length of 2 to 24, preferably 8 to 12 carbon atoms. As the sterol preparations are wettable and melt easily without the use of complex equipment, they can easily be incorporated into food, and produce, in particular, good organoleptic and sensory properties, in particular, in drinks.
