Abstract (en)  
[origin: WO2007101589A2] The invention relates to a grinding lamella (1), in particular for arranging on a rotatingly driven grinding disk (8), comprising at least two annular sections (4, 5, 6, 7, 24, 25, 26, 27, 34, 35, 36, 37, 44, 45, 46, 47) arranged next to each other at an angle (a), which at least partially has a shape which deviates from a circular disk having a central opening. A grinding disk (8) containing said grinding lamellas comprises at least one carrier element (2) and at least two grinding lamellas (1) of said type which at least partially cover and form together an annular shape. According to a cut pattern (14, 32) for a material cut or a material strip for producing said type of grinding lamellas (1), the grinding lamellas (1) are arranged next to each other in the same direction and also adjacent to each other and offset at 180°.
