Abstract (en)

[origin: WO2007102185A2] The present invention relates to a series of sugar sachets, or other food, joint or anyway linked each other, to be packed and used for a better packaging or placed into a dispenser for their tidy distribution by tearing. This invention improves packaging by rising the number of sachets with same volumes by 60%. Such compactness permits a reduction of the transport costs. This invention also relates to a strip, a reel and/or any other form of said series of sugar sachets, or other food - for example a series of folded sachets like a "concertina" - and to any dispenser used for their distribution.
