Abstract (en)

[origin: WO2007093679A1] Dispensing nozzle (1) designed to be connected to a dispensing member, such as a pump or valve, to form a dispenser of fluid product, the nozzle comprising a connecting sleeve (11) designed to be connected to an outlet (31) of the dispensing member, and the sleeve (11) being connected to an orifice from which fluid product (13, 13') is dispensed through an internal channel (12), said nozzle being characterized in that it also comprises a fluid-product collecting bowl (14) for collecting the fluid product at the outlet of the dispensing orifice, while the bowl defines a bottom (141) situated beneath the dispensing orifice in the normal condition of nozzle use, so that the fluid product falls by gravity into the bowl.
