Abstract (en)

[origin: WO2007098746A1] The present invention relates to a motor-operated component, in particular in or for a motor vehicle, which comprises at least in regions a material which is permeable to an electric field, and which comprises a sensor-controlled anti-trapping apparatus which contains at least one electrically conductive first sensor electrode which is arranged in the interior of the component in a region which comprises the material which is permeable to electric fields, and which is inaccessible from outside the component.
