Abstract (en)
[origin: WO2007101506A1] The invention relates to a valve bank (6) which comprises a plurality of electrically actuatable control valves which are connected simultaneously to at least one common cable duct (1) and a common vent duct (3, 5). The at least one supply channel (32, 33) supplies the common cable duct (1) with pressure means required for operating the valve bank (6). An additional safety valve (15) enables the channel connection between the at least one supply channel (32, 33) and the common cable duct (1) to be selectively released or blocked. When the connection is blocked, the safety valve adopts an aeration position and the common cable duct (1) is vented towards the atmosphere.
