Abstract (en)
[origin: WO2007103573A2] An inventive rearview assembly (10) for a vehicle may comprise a mirror element (30) and a display including a light management subassembly (101b). The subassembly may comprise an LCD placed behind a transfective layer of the mirror element. Despite a low transmittance through the transfective layer, the inventive display is capable of generating a viewable display image having an intensity of at least 250 cd/m² and up to 3500 cd/m². The display includes a novel backlighting subassembly (116) and novel optical components including a magnifying system (119), a depolarizer (121), a reflector (115), and a reflective polarizer (103b). The display may be configured to display an image having edges contoured to correspond to the edges of the mirror element.
