Abstract (en)

[origin: WO2007101413A1] The invention relates to a method and a system for configuring a monitor, and also to a monitor, a computer and a graphics card which can be used to carry out the method for configuring a monitor. When an input facility (14) has been operated on a monitor (10), a control signal is generated by a control signal generator (11) in the monitor (10). The control signal is transmitted from the monitor (10) to a computer (1), where it is detected by a control signal detector (3) in the computer (1). Next, a configuration program (7) executed by the computer (1) is activated for the purpose of remote configuration of the monitor (10) by the computer (1). The control signal which is transmitted from the monitor (10) to the computer (1) and detected therein allows the configuration of the monitor (10) to be activated in customary fashion, namely by operating the input facility (14) on the monitor (10), even in the case of remote configuration.
